Sidecar Data Catalog

Unlock the full potential of your data with a strong metadata foundation

Data management is becoming very complex with the increase of data sources, format heterogeneity, constant motion of the architecture landscape and the heightened regulations. And yet, users still want more data, faster and with better quality. It is therefore a real challenge to find the right information within vast amounts of data that can often be redundant and difficult to understand.
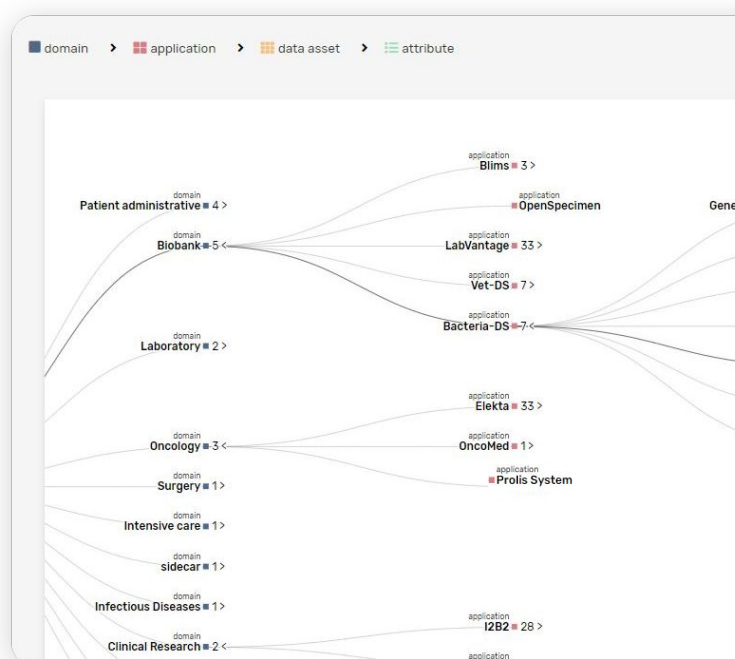

Sidecar brings clarity to these complex and fragmented environments.
It helps you share contextual information about the data itself, which leads to a better understanding of your assets and above all, trusting your data. Trusted data is the key to becoming a data driven organization and supports the entire user community: from the business analysts, data scientists to the CDO who needs to ensure proper use of the data across the organization.

Bring high business value to your data consumers with a simple solution

Sidecar will help you:

- Improve data efficiency across the organization
- Reduce the risk of errors and improve data analysis
- Improve visibility on data provenance and transformations
- Harmonize and foster semantic consistency
- Eliminate redundant datasets and associated data pipelines
- Reduce the risk of data breaches for sensitive data assets
- Stay in compliance with privacy laws

Product Highlights

Core features to successfully manage your data assets

Explore Your Data Assets

- Use powerful visualizations to navigate through your data assets
- Foster collaboration among the user community by exchanging ideas on the data asset definition
- Quickly identify the data expert to get support

Manage Sensitive Data

- Discover and locate sensitive data with our smart data search
- Create your own classifications such as GPDR, HIPAA, CPRA,...
- Associate confidentiality levels to your data asset

Enrich Your Data

- Add business context with a clear definition of the assets
- Describe in detail the business rules, the transformations and add custom tags
- Add key stakeholders such as the subject matter expert or the business owner to give data consumers additional support

Collect metadata

- Automatically gather all technical metadata
- Detect modifications and keep assets up to date
- Centralize all information in a single repository

Lean Technology Stack

We use known technologies and simple architecture for faster ICT adoption
